export class AlejandroFajardo {
name = "Alejandro Alberto Fajardo";
role = "Backend & Full-stack Engineer";

profile = `
  I build software that stays reliable as products grow. Backend,
  microservices and cloud engineering, with an end-to-end product
  mindset.
`;

experience = [
  { company: "DynamiCore",
  role: "Principal Backend Engineer",
  period: "October 2026 - Present",
  description: `
    Financial core built with microservices and serverless workflows on
    AWS Lambda, integrating banking services. Database modeling and
    optimization, consistency and concurrency control. Asynchronous
    processing and bulk user and data workloads, focused on
    performance, traceability and reliability.
  `,
  },

  { company: "Cute Digital Media",
  role: "Principal Software Engineer",
  period: "September 2024 - October 2026",
  description: `
    Microservices and multitenant platforms with Stripe, PayPal,
    Prospay and Fiserv payments. Automation and AI for pull request
    reviews and n8n workflows. Architecture focused on scalability,
    security, observability and operational efficiency.
  `,
  },

  { company: "Tecopos",
  role: "Full-Stack Engineer",
  period: "September 2023 - 2024",
  description: `
    Legacy system modernization and progressive migration to
    microservices across frontend and backend. Docker environments,
    load balancing, database optimization and automated CI/CD
    deployments.
  `,
  },

  { company: "UNE Mtz",
  role: "Principal Backend Engineer",
  period: "October 2021 - 2022",
  description: `
    Core business system development and architecture evolution,
    automation, continuous integration and A/B testing. Technical
    leadership of two teams: engineering practices, code reviews and
    delivery coordination.
  `,
  },

];
}
